

Desktop Single Signon PeopleSoft Solutions Extender

Wouldn't it be nice if your end users could seamlessly access your PeopleSoft applications without needing to stop and login?

Most organizations have a significant number (**potentially as much as 40%**) of their help desk calls deal with password resets. Given the cost of a fully loaded full time employee, then each password reset can cost between US\$16 and US\$25.

Of course, aside from the hard financial cost of password resets is the frustration that end users feel when accessing a system for which they can't remember the password. If your PeopleSoft system has a large number of users that don't access PeopleSoft every day, issues with logging into PeopleSoft may cause your user adoption to be much lower than you'd like. The soft dollar costs may even outweigh the hard dollar costs.

Grey Sparling Solutions, Inc. has an answer to this problem with our Desktop Single Signon PeopleSoft Solutions Extender. This snap-on product uses your existing Windows / Active Directory configuration to log your end users transparently into your PeopleSoft applications.

Powerful Features for your PeopleSoft system

This product provides features for you in 4 major areas. Within each area, we've provided features to reduce costs, reduce risk, and improve access to information.

Seamless User Access to PeopleSoft

Your end users will be able to access PeopleSoft directly, without being prompted for a PeopleSoft user id and password, without compromising security. Each user has their Windows user ID passed in "under the covers" to PeopleSoft, where it is mapped to a PeopleSoft user ID.

Seamless User Access to PeopleSoft

- Immediate Access To
 - Online Pages
 - Workflow
 - Reports
- Validation of user against Windows Domain / Active Directory
- Administrators can still access via PeopleSoft user ID and password (for accessing batch accounts, etc.)

Ease of Installation / Configuration

We provide a straightforward installation and configuration to "teach" your PeopleSoft system how to begin authenticating users based on the login information that they have already typed into Windows. You'll be able to begin testing within an hour or two of installation.

Ease of Installation / Configuration

- Automated installation
- Online pages for mapping Windows login names to PeopleSoft user IDs.
- Testing and diagnostic information
- No modification of PeopleSoft delivered objects.

Cross Browser Support

Internet Explorer and recent versions of Firefox/Mozilla/Netscape are supported directly for transparent authentication (where the user never sees a password prompt before accessing PeopleSoft).

For browsers that can not integrate with Windows directly (such as the Safari web browser), a password prompt is displayed for them to provide their Windows login name and password. If the correct information is provided, then the user is logged into PeopleSoft.

Infrastructure Re-use

The Desktop Single Signon PSE does not require any additional servers for your existing PeopleSoft infrastructure, even if you use Linux/Unix web servers and application servers.

No modification any delivered PeopleSoft objects is required, which lowers your cost when performing upgrades or regular PeopleSoft maintenance.

Real benefits you can leverage today

Desktop Single Signon is a product that allows you to realize significant benefits quickly and easily. By improving the use of your existing investment in your ERP application, we allow you to:

- Dramatically reduce your costs
- Dramatically reduce operational risks

Because you can deploy this product on using your existing PeopleSoft application, you can realize these benefits more quickly and with less risk than with any alternative.

Cuts Support Costs

- No more help desk calls for PeopleSoft password resets
- Less end user training involved for rolling out to PeopleSoft applications.

Increase User Adoption

- Remove barriers to access for infrequent users.
- Improve productivity for frequent users.

Dramatically Lowers Risks

- Implementation risks
- Less passwords to remember = tighter security

Cross Browser Support

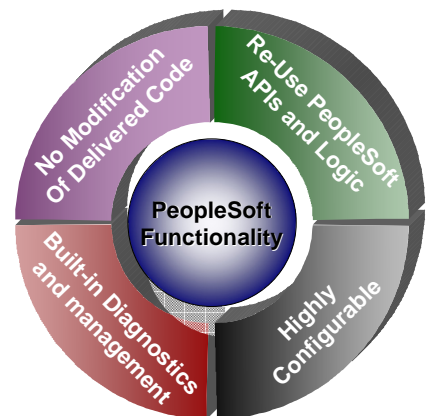

- Transparent Authentication
 - Internet Explorer
 - Firefox (recent)
 - Netscape (recent)
 - Mozilla (recent)
- Authentication via prompting for Windows login
 - All other browsers / platforms

Built for your success

We deliver our products as extensions of your PeopleSoft application. Because your application already contains a robust infrastructure for managing processing, handling business logic, and providing access to content, our strategy is to make the most of this infrastructure. This means fewer moving parts and less risk for you.

We also provide powerful support and diagnostic tools to reduce deployment and support costs. Finally, all of our solutions are highly configurable to allow you to set desired behavior without having to touch our code.

Learn today why leading organizations are using this solution to solve their user access and single signon problems today.

Who is Grey Sparling Solutions, Inc?

Grey Sparling Solutions, Inc. was founded to provide PeopleSoft customers enhanced functionality to meet their business needs using their existing PeopleSoft systems. Our products are built and deployed in a manner that eliminates implementation, upgrade, and integration risks.

Because we are the people who built PeopleTools, we are able to use our expertise to create products that are easy to deploy and use, while meeting the needs of the PeopleSoft customer.
