

Security Workbench PeopleSoft Solutions Extender

Maintaining security in PeopleSoft can be a very cumbersome and error-prone process. At the best case, the process of administering security is an expensive and labor-intensive process. At the worst case, it can cause system availability issues, expensive security audits, productivity loss, and even security vulnerabilities.

This product, the Grey Sparling Security Workbench allows organizations address all of these issues by allowing the security administrator much more visibility and control over the process of administering PeopleSoft security.

Managing the Process Better

The best practice for modifying the code that runs in your production system is to perform the development process in an environment that is separate from the production system, test it to ensure that it meets specifications and doesn't introduce any new issues, and then migrate those changes to the production environment. The upgrade functionality in PeopleTools was specifically developed to facilitate that process for the code that runs in a PeopleSoft application.

PeopleTools, however, doesn't have sufficient functionality to manage the security definitions in a similar manner. This means that most organizations end up changing security directly in the Production system whenever it needs to be done. Because of the potential impact to the production system, this often means that the security rules are seldom cleaned up, and it also means that the process of migrating new code and ensuring that security is set properly for that code is error-prone.

Administrator Activities

This product enables the Administrator to proactively and confidently perform common activities. It also allows him more flexibility in cleaning up security rules as well as allowing him to segregate duties during the security administration process.

Benefits

- Facilitate tracking security modifications
- Check for security dependencies to ensure that all objects are identified for migration.
- Look for dependent application data.
- Allow keeping dependent items on the production system, checking across both environments

Real benefits you can leverage today

The Security Administrator is a product that allows you to realize significant benefits quickly and easily. By improving the use of your existing investment in your ERP application, we allow you to:

- Dramatically reduce your costs
- Dramatically reduce operational risks

Cuts Operational Costs

- Fewer errors that cause security access issues
- Less downtime due to insufficiently tested changes.
- Less effort in rolling out new features, users, and security changes.

Dramatically Lowers Risks

- Fewer Security Vulnerabilities
- Fewer Implementation risks
- Tighter control over the security administration process
- Better segregation of duties. Administrator does not need access to sensitive application data.

Because you can deploy this product on using your existing PeopleSoft application, you can realize these benefits more quickly and with less risk than with any alternative.

Built for your success

We deliver our products as extensions of your PeopleSoft application. Because your application already contains a robust infrastructure for managing processing, handling business logic, and providing access to content, our strategy is to make the most of this infrastructure. This means fewer moving parts and less risk for you.

We also provide powerful support and diagnostic tools to reduce deployment and support costs. Finally, all of our solutions are highly configurable to allow you to set desired behavior without having to touch our code.

Learn today why leading organizations are using this solution to solve their user access and single signon problems today.

Who is Grey Sparling Solutions, Inc?

Grey Sparling Solutions, Inc. was founded to provide PeopleSoft customers enhanced functionality to meet their business needs using their existing PeopleSoft systems. Our products are built and deployed in a manner that eliminates implementation, upgrade, and integration risks.

Because we are the people who built PeopleTools, we are able to use our expertise to create products that are easy to deploy and use, while meeting the needs of the PeopleSoft customer.

We are the PeopleSoft Experts

- We defined the PeopleSoft technology strategy for a combined 15 years
- We created PeopleSoft's reporting tools
- We presented more than 200 PeopleSoft conference presentations
- We helped set the initial Fusion strategy
